

Azure AI Architect

PROFESSIONAL SUMMARY

Azure Architect specialising in secure, well-governed Azure PaaS platforms, backed by Microsoft certifications as an Azure Solutions Architect Expert and Azure Administrator Associate. Experienced in leading the design of enterprise cloud platforms built on landing zone principles, hub-and-spoke networking, private connectivity and centrally managed security controls, with reference architectures spanning App Service, Functions, API Management, Container Apps, Event Grid, Event Hub, Service Bus, Azure SQL, Cosmos DB, Storage and Key Vault, Embeds security, compliance and governance — Azure Policy, Defender for Cloud, Architecture Decision Records into delivery workflows rather than treating them as an afterthought.

CORE SKILLS

- Agentic AI & Foundry: Microsoft Foundry, Foundry Agent Service, Agentic Workflows, Multi-Agent Pipelines, LangChain, LangGraph, LangSmith, AutoGen, CrewAI, Semantic Kernel, MCP
- Generative AI & LLMs: RAG, Prompt Engineering, Fine-Tuning, Vector Search, Semantic Search, Embeddings, LLM Evaluation, Red Teaming, Guardrails, Azure AI Content Safety
- Azure AI Services: AI Search, Document Intelligence, Vision, Speech, Language, Translator, Cognitive Services, Hugging Face
- Cloud Platforms: Azure (App Service, Azure SQL, Storage, Key Vault, vNets, NSGs, Application Gateway, Container Apps, Event Hub, Event Bus, Monitor, Active Directory)
- Cloud Platforms: Azure (App Service, Azure SQL, Storage, Key Vault, vNets, NSGs, Application Gateway, Container Apps, Event Hub, Event Bus, Monitor, Active Directory)
- Architecture & Governance: Landing zones, hub-and-spoke networking, private connectivity, Architecture Decision Records, Azure Policy, Defender for Cloud
- DevOps & CI/CD: GitHub Actions, Terraform, Azure Artifacts, Release Management
- Monitoring & Observability: Azure Monitor, Application Insights
- Testing & Quality: TDD, Unit Testing, Peer Reviews, Static & Dynamic Application Security Testing (SonarQube/Sonar Cloud, CodeQL)
- Source/Version Control: Git/GitHub/GitLab
- Languages & Frameworks: .NET, C#, Python
- Content Management System: Adobe Experience Manager, Site Core
- Other: Agile/Scrum, Docker, Mentoring, Knowledge Sharing, Runbooks

PROFESSIONAL EXPERIENCE

Technical Architect *April 2021 – Present*

- Led architecture workshops, technical reviews, and Agile delivery teams across multiple concurrent client engagements.
- Architected a scalable Azure PaaS platform for ASDA, supporting the separation of 2,500+ systems from Walmart and improving e-commerce throughput by 30% through event-driven microservices and Azure API Management.
- Led the design and governance of an enterprise Azure PaaS platform, applying landing zone principles, hub-and-spoke networking and Architecture Decision Records so that every workload shared a single, governed, well-architected foundation rather than parallel, inconsistent environments.
- Provisioned secure Azure infrastructure (100+ resources including App Services, storage accounts, vNets, subnets, NSGs, Key Vault) using Terraform, ensuring enterprise-grade compliance, network security, and seamless integration with development workflows.
- Contributed to the development of asda.com e-commerce website.
- Integrated security scanning (SonarQube Cloud, Snyk and Trivy) across 300+ repositories, reducing critical vulnerabilities by 75% pre-deployment.
- Implemented observability stacks with Azure Monitor and Application Insights.
- Collaborated in Agile cross-functional teams with architects, UX/UI designers, QA, and product managers.

- Contributed to sprint planning, estimations, retrospectives, mentoring juniors, and enforcing TDD/code quality practices (reduced defects by 21%, recognized with Tata Innovation Award).
- Mentored teams on automation practices, reduced cloud spend by 12% and led incident response with automated runbooks and RCA.

Technical Lead *July 2020 – Apr 2021*

- Led cloud modernization for Leading Health Group, migrating legacy systems to Azure PaaS using microservices and Azure Functions, reducing infrastructure cost and improving API performance.
- Designed secure APIs using .NET Core and Azure API Management with OAuth 2.0 and RBAC.
- Automated CI/CD pipelines using Azure DevOps and Terraform, reducing deployment cycle time and improving release reliability.

Consultant *Aug 2013 – Mar 2020*

- Delivered digital transformation programmes for leading manufacture and aviation client using Azure PaaS and .NET Core.
- Built multilingual customer engagement platforms using Sitecore CMS and Azure APIs supporting 10+ languages.
- Led Agile teams of 8–12 engineers across design, development, and testing.
- Contributed to pre-sales, solution proposals, and client technical presentations.

Senior Software Engineer *Jun 2011 – July 2013*

- Involve in design, development, and testing.
- Contributed to pre-sales, solution proposals, and client technical presentations.
- Delivered Azure-based digital platforms for leading aviation client covering portals, dashboards, and enterprise integrations.
- I worked across architecture, development, and testing in Agile teams.

Software Engineer *Nov 2009 – Jun 2011*

- I worked across architecture, development, and testing in Agile teams.
- Involve in design, development, and testing.

Software Engineer *May 2008 – Nov 2009*

- I worked across architecture, development, and testing in Agile teams.
- Involve in design, development, and testing.

PROFESSIONAL ATTRIBUTES

- Collaborative mindset with ownership of tasks
- Genuine curiosity for cloud technologies
- Strong communication with stakeholders
- Positive, pragmatic approach to delivering customer value.

EDUCATION

- Master of Computer Applications (MCA) — Jun 2005-Jun 2008

CERTIFICATIONS

Cloud (Azure):

- Azure Admin Associate

- Azure Solutions Expert

Git:

- GitHub Copilot

AI:

- Azure AI Engineer Associate

KEY ACHIEVEMENTS

- Led the design and governance of an enterprise Azure PaaS platform, embedding Azure Policy, Defender for Cloud, and Architecture Decision Records into delivery workflows so that security and compliance were addressed by design rather than after the fact.
- Achieved a 99.5% deployment success rate across 160+ Azure resources by implementing IaC (Terraform) and automated CI/CD pipelines.
- Created end-to-end infrastructure for 8+ applications covering core Azure services (Active Directory, Management Groups, App Services, Azure SQL, VNets, NSGs, Application Gateway, Key Vault, monitoring tools).
- Reduced critical vulnerabilities by 75% through integrated security scanning (Snyk, Trivy) across hundreds of repositories.
- Delivered 18+ enterprise-grade applications (web apps, APIs, and interfaces) using .NET, Python, C#, and modern frameworks, supporting high-traffic environments (27M+ monthly users).
- Architected end-to-end agentic AI solutions using Microsoft Foundry, Foundry Agent Service, and frameworks like LangChain, LangGraph, AutoGen, CrewAI, and Semantic Kernel, orchestrating multi-agent pipelines that automated complex business workflows and significantly reduced manual effort.
- Standardized agent interoperability by adopting Model Context Protocol (MCP) and leveraging LangSmith for tracing and debugging, improving system reliability and streamlining integration and debugging efforts.
- Designed and deployed production RAG systems combining vector search, embeddings, and semantic search with fine-tuned/prompt-engineered LLMs, improving retrieval accuracy and response relevance over baseline solutions.
- Established responsible AI practices across the GenAI lifecycle, including LLM evaluation, red teaming, guardrails, and Azure AI Content Safety, ensuring safe, reliable model outputs and minimizing harmful or unsafe responses in production.
- Built enterprise-grade AI applications on Azure AI Services (AI Search, Document Intelligence, Vision, Speech, Language, Translator) and Hugging Face models, delivering multimodal, multilingual document automation and search solutions that reduced processing time and improved user experience across global teams.
